

# **INTERNAL MEDICINE - PATIENT SPECIFIC REPORT AVAILABILITY**

---

## **Bulk Billing Transition to Patient Specific Report Availability for Internal Medicine DHA 1-8 & IWK**

Historically bulk billing reports have been available to support Internal Medicine bulk billing submission to MSI. As a result of the Bulk Billing Transition Project HITS NS has created reports to support patient specific claims submission to MSI. These reports will be accessible in the same system that historically provided the bulk billing reports with no user access change required. Should you require access to these new reports please follow the user access process at the district level.

### **Internal Medicine outside of QEII within CDHA:**

The reports to support patient specific claims submission to MSI can be created from the database search tool within NSES MUSE. The report does not contain the hospital admit date as this is not available in NSES MUSE; however, this information is available within other hospital information systems.
