

RADIOLOGY - PATIENT SPECIFIC REPORT AVAILABILITY

Bulk Billing Transition to Patient Specific Report Availability for Radiology DHA 1-8 & IWK

Historically bulk billing reports have been available to support Radiology bulk billing submission to MSI. As a result of the Bulk Billing Transition Project HITS NS has created reports to support patient specific claims submission to MSI. These reports will be accessible in the same system that historically provided the bulk billing reports with no user access change required. Should you require access to these new reports please follow the user access process at the district level.

Radiology at CDHA:

For CDHA DI, radiologists and/or administrative staff will execute the report(s) from the Radiology Information System (Cerner RadNet) using the same application they currently use to generate their bulk billing report.

These reports will be available by March 31, 2015 in advance of the April 1, 2015 go live date.
